

Drinking Water State Revolving Fund

City of Olympia

417 Zone Reservoir

The City's "417 Zone" needs to have adequate storage to meet required chlorine contact time and peak demands. The zone's existing Hoffman reservoir needs cleaning and maintenance, neither can occur without taking the reservoir offline. To properly manage their system the city needs a new tank in the 417 Zone. This tank helps them remain in compliance with drinking water standards and complete necessary maintenance to the Hoffman reservoir to maintain existing infrastructure. The City of Olympia applied for and received a Drinking Water State Revolving Fund construction loan for:

- \$9,385,803.83, at 1.00 percent interest, with a twenty-year repayment period.

Public health and environmental benefits

The City of Olympia can complete necessary maintenance of existing infrastructure, meet chlorine requirements and peak demands. This project makes the City's water system more resilient and able to meet drinking water standards.

Completed new tank.
